Picture light 40232-2

The Traditional Family

This is perhaps the most unpretentious item we ever produced. The simple function of a wall-mounted picture light combined with the most versatile platform for light sources, the Edison-Socket for incandescent light bulbs or more recent halogen bulb or modern LED-bulbs.

A straight brass pipe in a plain polished finish houses two light sources. The choice of electric platform facilitates easy installation without the need for transformers or other electronic devices.

Ready to order as it is in different finishes or as a starting point for bespoke designs, the options are boundless...

Design: Lobmeyr, circa 1980; Modern
